1. Introduction

ECHoS project aims to facilitate the creation of operational synergies with and between key EU Initiatives, programmes and strategic EU plans related to Health and Cancer. The aim of these synergies is the optimisation of ongoing initiatives at European level to support the implementation of the Mission on Cancer. The panorama of actions supporting the five pillars of the Mission is in fact extremely heterogeneous, with the presence of initiatives formally hinged within the objectives of support for the European strategy to combat cancer, as well as many others that skirt the topic without being associated with it in a codified manner. For these reasons, in order to avoid the risk of creating redundant, or even worse, conflicting activities at Community level, it is appropriate to define the state of the art concerning the initiatives underway at European level in support of the Mission on Cancer, in order to find points of contact and collaboration in the implementation of common activities.

In order to achieve this, ECHoS will adopt a "live" mapping strategy of current initiatives supporting mission on cancer, and an ambassador identification system for the most relevant initiatives. This system will enable contact points, internal to the ECHoS consortium, who will actively update on the status of the project activities represented, planned activities, potential contact points with ECHoS and proposals for setting up joint initiatives. This initiative will allow a close follow-up of target initiatives aiming for the development of effective synergies.

The creation of synergies will be developed around elements such as:

- creation of joint activities with other initiatives in order to optimize the consultation of stakeholders involved in the creation of National Cancer Mission Hubs;
- dissemination of the results that will be produced under ECHoS to an audience of health professionals, policy makers, citizens and patients;
- identification of potential exploitation activities.

To better inform on potential synergies and on the input from the Ambassadors, a toolkit is being developed to include the information on the mapping, material, training events, workshops, knowledge exchange, research programmes, funding opportunities, policy promotion events etc. This toolkit will

be available on the project website (D4.1 Toolkit section on the website linking to relevant initiatives, events, and materials).

In summary, the aim of this listing is three-fold, 1) to ensure that ECHO S is well connected with relevant initiatives 2) to ensure that the National Cancer Mission hubs have the information for events and funding opportunities from other initiatives, and 3) to avoid overlaps with other projects and initiatives. This task is being implemented with a close collaboration with Task 3.2 *Identify stakeholders and create an interactive tool for stakeholder engagement at MS/AC* and T6.1 *Dissemination and Communication*.

2. Methodology

Given the tight timeframes of this task, work on this task began immediately. The Task leaders (EKT and UCSC) together with the Work Package Leader (MCST) prepared the ground to launch the task in the ECHoS Kick-off meeting. An online form was created, and all partners were invited to contribute by suggesting projects and initiatives and to nominate Ambassadors who could take on the role (Annex I).

Following the first selection, the task leaders structured the information received in a new matrix categorizing the different initiatives and projects according to the programme (HE, EU4HEALTH programme etc), type of instruments and Cancer mission pillar (understanding, prevention, optimisation, support, and equitable access).

Figure 1 Cancer Mission Intervention Areas

3. List of initiatives

Through a comprehensive analysis of the entries received via the online form, a total of 68 initiatives were identified to establish synergies with. The table provided below illustrates these initiatives, showcasing their respective programs, types, acronyms, and their alignment with the Cancer Mission.

4. List of Ambassadors

Ambassadors, consortium members with the role to actively engage in and advocate for the best interests of ECHoS in the various EU initiatives, were identified for 43 initiatives. The assigned ambassadors and the corresponding initiatives they liaise with are outlined in Table 2.

The list of ambassadors takes the form of a dynamic document, in which the names of the various representatives, however internal to the consortium, will be periodically updated according to the type of involvement of individuals within the specific initiatives.

5. Way forward

As a way forward, this task will now start the ranking process whereby the most important initiatives will be prioritised, and ambassadors will be briefed accordingly as to which kind of information they need to provide as input into the toolkit.

Subsequently throughout the project, based on the information from the other ongoing initiatives, practical activities in terms of synergies coordinated by the ambassadors and WP4 will be initiated.

The list will remain an open list, meaning that new projects and initiatives may be added at any time.

Annex I

Work Package 4 of the ECHO S project is dedicated to creating Synergies with other relevant projects, initiatives and other missions and partnerships.

By Month 3, the WP4 team is to submit an initial mapping of all the relevant projects / initiatives.

The mapping will be done in stages and will be continuous throughout the ECHO S lifetime.

The first stage is for the consortium members to provide us with the first set of projects of relevance that they are aware of.

Please fill in all questions in the next sheet, following the instructions provided with light green fill.

If you would like to be an Ambassador for a specific project/initiative which is already listed in the attached, kindly simply add your name and email to list of names/emails.

This information will be fed into a toolkit which will be created for these synergies whereby it will enable the effective and timely exchange of information from the projects in synergy with ECHO S and the National Cancer Mission Hubs.

Furthermore, regular meetings by Ambassadors and the Task leaders can be foreseen to ensure the smooth-running of such synergies.

For further information or to send any files / information (including logo) kindly send these to Ms Sofia Xesfingi (sxesfingi@ekt.gr) and Mr Tommaso Osti (tommaso.osti01@icatt.it)

Please send us your input by 31 May 2023
